

CLAIMS AS PENDING IN THIS APPLICATION

- 
1. (Amended) A method of using a first communications device together with at least one other communications device, the method comprising:  
playing back audio signals in said first communications device;  
transmitting the same audio signals to the at least one other communications device;  
and  
playing back said audio signals in the at least one other communications device.
2. (Amended) A method according to claim 1, wherein said first communications device comprises a mobile telephone.
3. (Amended) A method according to claim 2, wherein the at least one other communications device comprises a telephone.
- 
4. (Amended) A method according to claim 3, further comprising:  
establishing a connection through a network between the first communications device and the at least one other communications device;  
establishing a telephone conversation by transmitting voice signals through a channel in a connection in a network; and  
transmitting said audio signals from the first communications device to the at least one other communications device through the connection in the network.
5. (Amended) A method according to claim 4, further comprising:  
mixing said voice signals and said audio signals; and  
transmitting the mixed voice and audio signals from the first communications device to the at least one other communications device through a common channel in the connection in the network.

6. (Amended) A method according to claim 5, wherein the common channel comprises a normal telephone voice channel.

7. (Amended) A method according to claim 5, wherein the common channel comprises a data channel.

BR  
8. (Amended) A method according to claim 4, further comprising:  
transmitting the voice signals through a normal telephone voice channel in the connection in the network; and  
transmitting said audio signals from the first communications device to the at least one other communication device through a data channel parallel to said voice channel in the connection in the network.

9. (Amended) A method according to claim 3, further comprising:  
establishing a connection through a network between the first communications device and the at least one other communications device;  
establishing a telephone conversation by transmitting voice signals through a channel in the connection in the network;  
transmitting said audio signals from a service provider via the network to the at least one communications device; and  
transmitting the same audio signals from the service provider via the network to the at least one other communications device.

10. (Amended) A method according to any one of claims 7-9, wherein said audio signals are transmitted in a form of a digitized and compressed audio file.

11. (Amended) A method according to claim 10, wherein the digitized and compressed audio file is compressed in a MP3 format.

12. (Amended) A communications system comprising a first communications device and at least one other communications device, wherein the system is adapted to:

play back audio signals in said first communications device;

transmit the same audio signals to the at least one other communications device ; and

play back said audio signals in the at least one other communications device .

13. (Amended) A first communications device adapted to be used in a communications system comprising at least one other communications device, the first communications device further comprising:

means for playing back audio signals; and

means for initiating transmission of the same audio signals to the at least one other communications device, such that said audio signals can be played back in the at least one other communications device.

14. (Amended) A communications device according to claim 13, wherein the first communications device comprises a mobile telephone.

15. (Amended) A communications device according to claim 14, wherein the mobile telephone is adapted for use in a public network.

16. (Amended) A communications device according to claim 13, wherein the communications device is adapted for use in a wireless shortlink.

17. (Amended) A communications device according to any one of claims 13-16, wherein the means for playing back audio signals comprises an audio device integrated in the communications device.

18. (Amended) An accessory device for use in connection with a first communications device adapted to be used in a communications system comprising at least one other communications device, the accessory device comprising:

means for playing back audio signals through the first communications device; and

means for initiating transmission of the same audio signals to the at least one other communications device, such that said audio signals can be played back in the at least one other communications device.

19. (New) A communications device according to claim 15, wherein the public network comprises a GSM network.

20. (New) A communications device according to claim 15, wherein the public network comprises a GPRS network.

21. (New) A communications device according to claim 15, wherein the public network comprises an EDGE network.

22. (New) A communications device according to claim 15, wherein the public network comprises a WCDMA network.

23. (New) A communications device according to claim 16, wherein the wireless shortlink comprises a Bluetooth connection.

*Handwritten: B2*  
24. (New) *Handwritten: 7* A communications device according to claim 16, wherein the wireless shortlink comprises an infrared connection.
